

Requirements Engineering: Best Practice

Samuel Fricker

Abstract

Requirements engineering is established as a discipline. More than 2000 articles were published in venues devoted to the topic. About 500 books were written about it. As a result, universities are eager to teach the topic, and companies adopt what is considered to be 'best practice.' However, what is that 'best practice' in requirements engineering that we should research, teach, and apply? This talk will shed some light on what 'best practice' means and what we can and should do about it. It hopes to surprise and stimulate our thinking for where we are and want to go with our discipline.

Bio

Prof. Dr. Samuel Fricker is interested in small products that help to solve big challenges. With more than twenty years industry and research experience, he has worked with companies at any scale, from Startups to Fortune500, and with the European Commission.
